CLASSWORK - Combining Like Terms & Distributive Property

I could easily use Distributive Property to group $(\$3 + \$5)$ and multiply by 6 so it would look like this: $6(3 + 5)$. This would also be the same as solving it like this: $6 \times 3 + 6 \times 5$. Using Distributive Property would be easier to use, both ways would get a total of \$48.

How to teach Distributive Property in your middle school ...

Using the Distributive Property when Solving Equations Now is your chance to learn how to use the distributive property and combining like terms in order to solve more complex equations. It seems pretty easy to learn all of these skills in isolation, but using them together to solve one problem is the key in Algebra 1.
