An open-loop control system utilizes a controller or control actuator to obtain the desired response as shown in Figure 2. The open-loop control system utilizes an actuating device to control the process directly without using feedback. An example of an open-loop control system is an electric toaster. Figure 2 Open-loop control system (no feedback)

### Introduction to Control Systems - Engineering

A continuous control system uses some type of sensor to measure the process that requires control. This measurement is input to a controller that decides the amount of corrective action, if any, that must be applied to the process. The corrective action signal is transmitted to an actuator. This device causes the changes in process.
